Gregory Portent demands revenge.

Revenge is best served cold and when the prey begs to be the target. With his skills and charisma he lures them in easy-using an investment bank to launch a Ponzi scheme. Gregory Portent has one advantage-artificial intelligence.

At a critical point, he loses his way. A "black swan" event follows and the Ponzi scheme borders on the brink of collapse. It's not about revenge anymore; it's about survival. Greedy lawyers, the FBI, and international syndicates pursue him. Greg must go on the run. Everyone he cares about is now in danger. He must win. The strange thing? You'll be rooting for him the whole time. Will he win big and get his vengeance?

Robert Buschel proves beyond a reasonable doubt, he is a rising storyteller. Pick up [God's Ponzi](#) and unlock the secret behind the world's most diabolical Ponzi scheme.

Robert Buschel is a trial lawyer. His ideas for writing blossom from his curious and peculiar world where he works. He has represented a software company attacked by a bankruptcy trustee that threatened jail of the company's lead technologist if he did not release the private data of all the companies' clients. The company prevailed four years later when it turned out some Defense Department data was on the company's servers. Rob recently represented Roger Stone in *Democratic National Committee v. The Russian Federation* and *United States of America v. Roger Stone*. And January 6 lawsuits and investigations. Rob frequently lectures about constitutional issues, policies, and legal procedures.
